

PRACTICE CREDIT COMMITTEE · DATA AS OF 31 AUGUST 2026

JPMorgan Prime Money Market Fund

RECOMMENDATION

Strong credit profile

Liquidity on watch. Recheck with the September filing.

WHY

- Credit is high quality and granular: largest entity 3.44% of net assets
- Maturity well inside limits: WAM 42 days, WAL 67 days
- Weekly liquidity thin, but typical of prime funds

Independent illustration from public SEC Form N-MFP data. Not a credit rating and not any rating agency's methodology.

Credit quality is high and granular

Short-term ratings as filed

90.8% Moody's P-1

Fitch: F1+ 67.2%, F1 13.8%

S&P: A-1+ 32.5%, A-1 64.4%

% of net assets. Agencies rate different securities, so shares are not compared across agencies.

Concentration vs 38 prime peers

3.44% largest entity

Peer median 4.25%

Top five 13.69% (median 16.79%)

Legal-entity level; at least 72% of net assets is financial-institution paper, deposits and repo.

Maturity inside limits

42 days WAM

Limit 60; peer median 38

WAL 67 days: limit 120;
median 65

WAM longer than 74% of peers: more interest-rate reset risk than the norm.

Weekly liquidity is thin but normal; daily liquidity is the outlier

Weekly liquid assets, lowest in August

Daily liquid assets, lowest in August

● Fund | Median ■ Middle half ∴ SEC minimum

\$3.17bn worst 5-day outflow (3.4% of net assets), ending 31 Aug: the day daily liquidity hit its low

A **30%** instant redemption exceeds month-end daily liquid assets; weekly liquid assets cover it

No day below either SEC minimum in 21 reported days

A quarter of the fund sits in repo against non-government collateral

25.3%

of net assets, the 87th percentile of 38 prime funds (median 7.8%)

20 counterparties; largest Société Générale at 2.92%

Collateral 1.059–1.078x the position on the top five: 5.9–7.8% cushion

Collateral behind that repo, by value

What would change the view

Downward

- Weekly liquidity held below 50%, or falling toward the 25% board-notification level
- Repeated month-end daily liquidity below 25%
- More non-government repo, or more equity and private-label collateral
- Collateral cushion below about 5%

Upward

- A larger daily liquidity buffer at month-ends
- Less reliance on non-government repo

Questions for the committee

1. Is the lean daily buffer a deliberate yield choice?
2. What haircuts apply to equity and private-label collateral?
3. Do current criteria still cite 10% / 30% liquidity?
